

WHAT IS CLAIMED IS:

1. A method of making a material comprising the steps of coating a support with a solution comprising a polymer and at least one blowing agent, activation of the blowing agent being prevented until after coating.
2. A method as claimed in claim 1 wherein the blowing agent is dual melted into a layer of solution prior to coating.
3. A method as claimed in claim 1 wherein one component of the blowing agent is dual melted into a layer of solution prior to coating and one component is added to a melt prior to coating.
4. A material formed by a method as claimed in claim 1.
5. An inkjet recording medium formed by a method as claimed in claim 1.
